VANTAGE PRO

The Vantage Pro (**6150C, 6151C**) and Vantage Pro Plus (**6160C, 6161C**) cabled stations include two components: the Integrated Sensor Suite (ISS) and the console. The ISS contains the sensor interface module, rain collector, anemometer, and either a passive radiation shield or a fan-aspirated radiation shield. The Vantage Pro console provides the user interface, data display, A/D conversion, and calculations. The Vantage Pro Plus station includes two additional sensors that are optional on the Vantage Pro: the UV Sensor and the Solar Radiation Sensor. The console and ISS are powered by an AC-power adapter connected to the console. The Fan-Aspirated Radiation Shield is powered by its own AC-power adapter. Batteries can be installed in the console to provide a backup power supply. Use WeatherLink for Vantage Pro to interface with a computer, to log data, and to upload weather information to the internet.

The **6150C** and **6160C** rely on passive shielding to reduce solar-radiation induced temperature errors in the outside temperature sensor readings. The Fan-aspirated **6151C** and **6161C** combine passive shielding with a fan that draws outside air in over the temperature and humidity sensors, providing a much more accurate temperature reading than that available using passive shielding alone.
